

How do the notifications work for calls from Trusted persons?

Receiving notifications

1

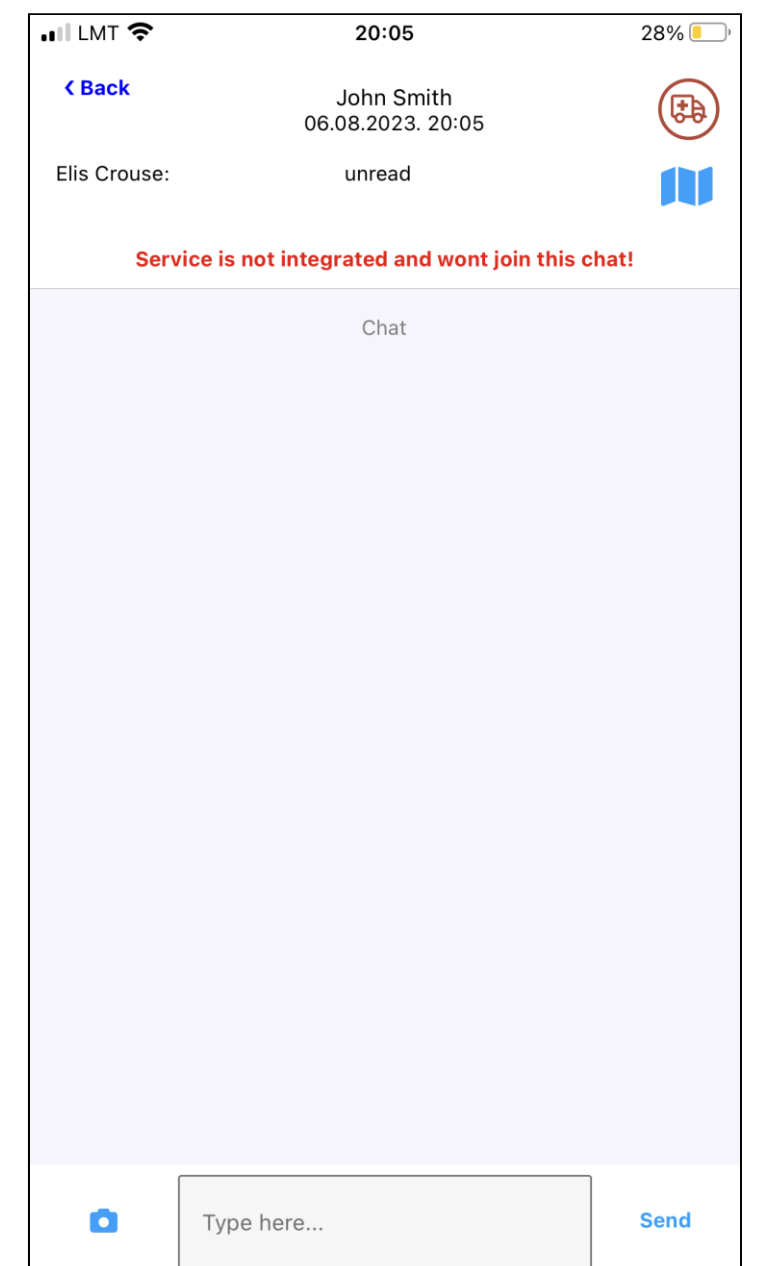

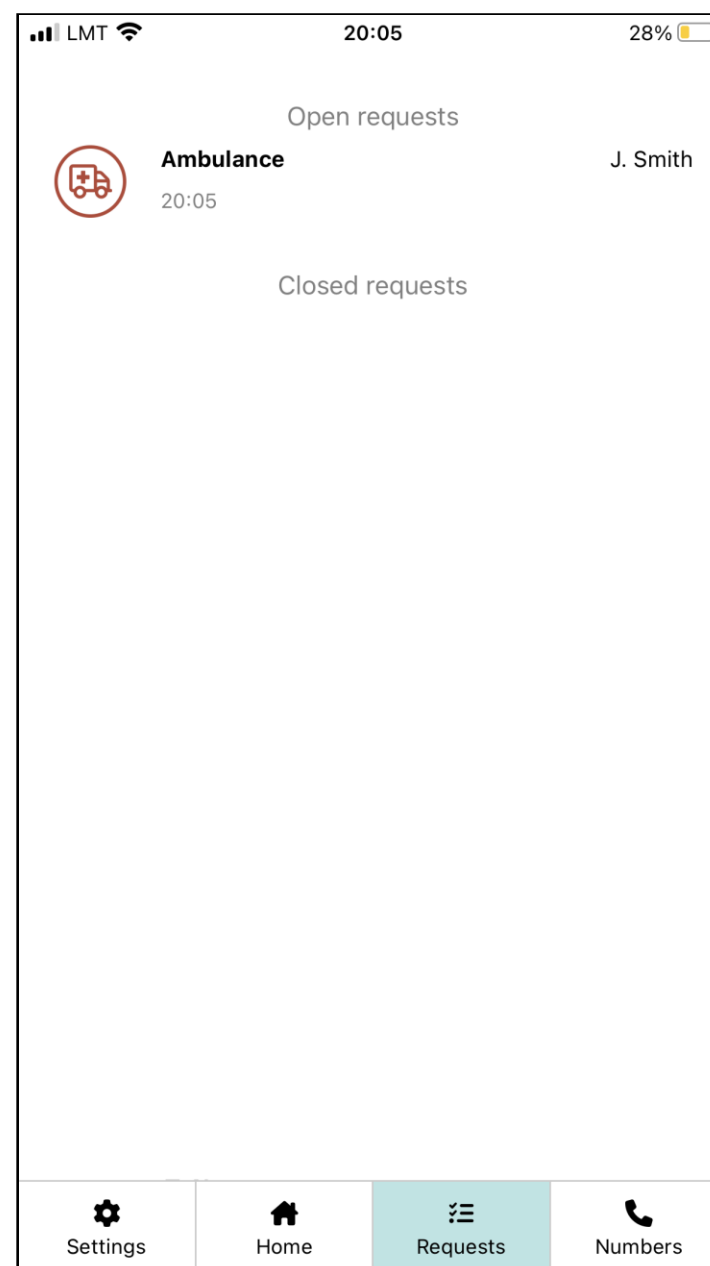

- If the Trusted person designates you as the recipient of the notification, you will receive the Notification regardless of whether the call is made to an Integrated or Non-Integrated number, provided that the call is made from the app.

Reading a notification

2

- When you receive such a notification, you will see which Trusted person has called, at what time and to which service by opening the "Request" section.
- When you open the request itself, you can see on a map from where exactly (GPS) the call was made.
- The caller and his/her Trusted persons can communicate with each other (including by sending a photo) in the chat. If the number is integrated, the operator also be able to join the chat, depending on the degree of integration.
